

Hello Oracle HR Team,

I'm **Arya Babu**, a **Junior Python & Django Developer** with a passion for building real-world solutions using backend logic, automation, and AI. I'm writing to express my interest in the **Product Development – IC2** role at Oracle.

My hands-on experience includes developing Django-based web applications with REST APIs, integrating vector search with **MongoDB Atlas**, and building smart tools like a resume parser using **LLAMA 3 + LangChain**. I recently contributed to a people-counting system using **YOLOv7** and created a GUI-based diagnostic tool using Customtkinter for real-time debugging.

What sets me apart is my ability to blend backend logic with intuitive UX design — whether it's through responsive dashboards for sellers (CocosCart) or AI-integrated resume tools. I'm eager to apply these skills to a high-impact environment like Oracle, where clean architecture and innovation matter.

I thrive in collaborative environments and love contributing to clean, scalable codebases. With strong foundations in Python, SQL, RESTful APIs, and a growing understanding of software architecture, I'm confident I can contribute meaningfully to your product development team.

I've attached my resume for your review. You can also check out my work at:

 Email: aryaub98@gmail.com

Thank you for considering my application. I look forward to the opportunity to collaborate with a forward-thinking team like yours at Oracle.

Sincerely,

Arya Babu

Junior Python Developer | Trivandrum, India
